Date: 23 March 2004/5912

Abstract

(in conjunction with Fig. 4)

In order to produce (cigarette) packs with an insert blank (25) applied within the pack or to the outside of the latter, this insert blank is fixed temporarily by virtue of the pack or pack contents being electrostatically charged in the region of the insert blank (25). The pack is completed while the static charge is active, with the result
5 that, by way of pack blanks, the insert coupon (25) is fixed in the envisaged position by the pack itself.
